

## ***ABSTRACT***

---

*Klinik Pratama Cikutra Sehat is a facility that provides services to people related to health. In recording the patient's medical data is still done manually. Financial records that form income and expenses are not recorded in detail according to the accounting record, the result of the income of services only gained from the income of patients who came to do the examination and receive the drug and for the purchase of drugs and financing of costs involved in spending. The calculation of the doctor's service fee is based on how many patients are handled. The method used in the application development is the Prototype method and is implemented in the PHP CI programming language and the MySQL database. Testing was conducted using black box tasting. The application can manage patient's data, patient medical record, General Journal, Ledger, balance sheet, and operational reports.*
