

ABSTRACT

The role of the Guidance Counseling Teacher in the school fosters discipline and appreciation which will be written on the end of the report card with an assessment index scale. This project aims to make it easier for Counseling Guidance teachers and subject teachers to record student achievement and violation records, facilitate Counseling Guidance teachers in recording student records, create an objectively scaled attitude index, and obtain information regularly when there is a record of achievement and violation records. The method used in this research is prototype. Where the product will be made, presented to the client, then fixed until reaching an agreement. Application testing uses the black box method, unit test, and the system usability scale. This project helps Counseling Guidance Teachers and Subject Teachers in supervising and assessing students' attitudes and behavior at school. Counseling Guidance Teachers can easily recap the record of student violations and will get an attitude scale score objectively because there is accurate data. Updates on the data collection of student records can be seen through the CIS website of the student status section.
