University library is an integral part of education which aims to achieve university's tree teachings (education and teaching, research and development, and community service). Today, we are a part of digital era, where most information are available digitally. As a result of this technology advancement, the idea about library has shifted. Library is not about big shelves that holds tick books anymore. As Jerry D. Campbell said in his journal called *Changing a Cultural Icon: The Academic Library as a Virtual Destination*, because of digital era, physical library collection number has gone down, which means more space for libraries to expand their service and facilities to accommodate ongoing shift in library service. Universitas Jendral Soedirman Central Library saw this shift as a need to change its service to digital library. Using technology approach, this redesign aims to help the central library to deliver service and facilities that suits the digital era, which includes self-return book service, technology incorporation such as RFID gate, workspace occupancy sensor, dan other technologies related to furniture and interior design. Dynamic library concept is applied to face the development and changes in the future. COVID-19 pandemic also affects the layout planning not only today but also in the future.

Keyword: University library, technology, pandemic, digital library
