ABSTRACT

At digital era, the habits of the people of Bogor City in seeking information tend to be through the use of gadgets. This trend has led to a decline in the interest in reading books of Bogor City residents. The decrease in interest in reading books of Bogor City residents also has an impact on the Regional Public Libraries of Bogor City, which has experienced a decrease in visitor visitors every year. In addition, the decline in library visitors was also caused by the existing conditions and the interior that was no longer representative for its use. Under these conditions, the Bogor City Regional Public Library needs to move a new building with a more adequate existing. Moving a new building also requires an interior design that can increase the interest of visiting Bogor City residents.

The purpose of the New Interior Design of the Bogor City Regional Public Library is to increase the interest in visiting Bogor City residents to the library by providing the library facilities needed today. In addition, this design also creates a new space atmosphere that is more friendly to Bogor City residents of various backgrounds and ages. To create the atmosphere of the space, this design is adapted to psychological development which is divided into children, adolescents, and adults. The methodology used in this design is observation, interviews and literature study. The results of this design are expected to create a new interior library that can attract the interest of residents of Bogor City and can meet the needs of residents in seeking information.
