

ABSTRACT

Transmission of COVID-19 in family clusters still dominates in Jakarta. The factor in the occurrence of COVID-19 transmission in family clusters is that there are unintentionally family members who bring the virus into the house so that the role of family communication is urgently needed to break the chain of COVID-19 transmission through the implementation of family functions in COVID-19 health literacy. This study aims to find out how the role of family communication in the application of family functions in COVID-19 health literacy. The research method used is descriptive qualitative with a phenomenological approach and paradigm as well as thematic analysis assisted by ATLAS.ti software. The results of this study indicate that the role of family communication is conceptualized based on conversation and high conformity in the application of family functions in COVID-19 health literacy. The application of social and cultural functions as well as protection functions are conceptualized based on conversations. Then the application of the reproductive function and the environmental development function are conceptualized based on conformity. Then the application of religious functions, functions of love and affection, functions of socialization and education, and economic functions are conceptualized based on conversation and conformity.
