

ABSTRACT

Lighting is one of the most important components when carrying out activities in life to fulfill visual desires. Residential houses on Jalan Captain Tendean in a tatami room want lighting products that have an even distribution with lighting levels that suit the room. Therefore, by using the zen concept, the lighting produced will build comfort and tranquility in the tatami room at the residence.

The research method used in this design uses a qualitative descriptive method that results in the design of lighting products, where the research process follows an observation process with a zen concept that pays attention to lighting product design and lamp layout according to the room and interior used. This design aims to design lighting products that can support activities in the tatami room at the residence to increase comfort.

Keywords: *design, lighting products and placement.*
