

## ABSTRACT

*This study focuses on barriers to interpersonal communication between parents and children during the Covid-19 pandemic. Where the Covid-19 pandemic has had an impact on several sectors, including the education sector, which requires universities and schools to learn from home. This triggers a communication gap between parents and children. This study aims to find out what obstacles occur in interpersonal communication between parents and children during the Covid-19 pandemic. This research method uses qualitative by using data collection techniques through interviews and documentation. Based on the results of this study, the obstacles that occur between the interpersonal communication of parents and children have their respective obstacles such as miss communication in conveying feelings or messages that are usually carried out by parents and children, as well as obstacles, especially the problem of distance when communication is carried out before the pandemic and in the future. pandemic barriers that arise because of busyness that is done at home but with busyness yourself.*
