

ABSTRACT

The Web-Based Kampung Sinau Bedoho Tourism Village application is an application that contains ticket information, tourist events and UMKM products in Bedoho Village. The dissemination of information on tourism villages is still not comprehensive so that traveling in the village is less attractive to tourists. This application was built to help tourists find out about tourist villages and tourist events as well as UMKM products in Bedoho Village. In addition, this application also helps Bedoho Village Officials in managing the Kampung Sinau Tourism Village. The use of this application uses the Waterfall method and uses the PHP Framework CodeIgniter programming language and MySQL database. The results of this application can help tourists find out what tourism is in the village and village officials in managing Kampung Sinau.

Keywords: Tourism Village, Application, CodeIgniter.
