

ABSTRACT

The coronavirus pandemic has affected all lines of the business sector, including technological developments. During a pandemic like this we are forced to adapt, where repetitive tasks that take up a lot of time can be replaced by software bots. This is no exception for Micro, Small and Medium Enterprises (UMKM), especially in the food and beverage (F&B) sector, who have difficulty calculating sales and managing their business inventory. Therefore, Automate All innovates to build a website-based AutoCalculation software product. Where the application can perform product management, inventory management of goods or materials, manage customer orders, calculate cost of goods sold, and recap finances. So that it can make it easier for Micro, Small and Medium Enterprises (UMKM) in the food and beverage (F&B) field to carry out their business processes and get maximum results.

Keywords: *repetitive task, F&B, software, UMKM*
