

ABSTRACT

This final project aims to create an Educational Competition Event Portal Application. This application was made because there are still many students or the general public who have difficulty in finding information and registering for a competition, and helping the committee that organizes a competition can spread information about the competition more widely and can manage data from the competition easily. This application development uses agile method, built with Laravel framework, PHP programming language, MySQL database and editor tools using Visual Code Studio. With this application it is expected to help prospective participants to find information about a competition and register a competition, as well as to help the organizing committee of the competition to disseminate information about the competition and manage the data of the competition.
