

## ABSTRACT

---

*Final Project Catalog Application (Case Study Diploma Information System Major Of Applied Science Telkom University) is a web-based catalog application that can accommodate the application of final project results available at the Telkom University Faculty of Applied Sciences. This web-based application is built using the PHP programming language that is applied using the CodeIgniter and MySQL framework as the data storage media. With the construction of this application, it is expected that students can see the implementation of project applications to become a reference for students to create application projects.*

*Keywords: Project 2, CodeIgniter, PHP, Application.*
