

ABSTRACT

The Sumatera Institute of Technology (ITERA) is classified as a new campus so that the construction of buildings to support lectures is still ongoing. There are still many buildings needed, one of which is the Student center. The purpose of this design is to accommodate student activities that are in accordance with the characteristics of generation Z and can attract concentration and relax space users. By using a space psychology approach to form a space atmosphere and user perceptions of space so as to improve the quality of student activities. With the application of the theme "Force Of Nature" which applies the power of nature to space, and by applying the concept of "Nature" into the student lounge, auditorium and student secretariat it produces a space that can relax the mind and increase the concentration of space users so that it can increase interest and talent. , as well as student creativity.

Keywords: *new design, student activity center, spatial psychology.*
