ABSTRACT

Company Funding Information System is a system for the Rastek.id company which includes monitoring company financial expenses, recapitulating company financial expenses, and submitting reimbursement to the company for employees. By using android and web-based applications to produce fast, easy, and accurate information in order to support the progress of the company. expenditure monitoring, recap of financial expenditures are the main things in the company's financial problems because they are still manual using paper sheets while and use excel to recap them. This information system for submitting company funds (Azuan) was created using descriptive research methods with the type of case study research at the Rastek.id company, where the data collection techniques used include literature studies, data search and collection, system design, implementation, testing and analysis, and system documentation. For the design method used in making the system using the ERD method as a data model and UML as a process model.
