

ABSTRACT

Kalismala Husada Clinic is a clinic that was established in 2016 in the Wonogiri area. Kalismala Husada Clinic has quite complete facilities, one of which is the public poly facility. Along with the times, Kalismala Husada Clinic in recording such as patient records, examinations, recording medical records, recording drug prescriptions and in payment has difficulty because it is still recorded using books or paper, which raises many obstacles including writing that cannot be read, because Not only one person wrote in the book, the book could be lost, damaged, or torn. For this reason, a solution is given to this problem by creating an application to help the process of computerized health services. Before making the application, what must be done is to analyze and interview the needs needed in health services such as recording patient data, examinations, recording medical records, recording drug prescriptions and payments. The application created serves to store all web-based outpatient data. This application is made using the PHP programming language and MySQL database.

Keywords: clinic, outpatient, application.
