

ABSTRACT

The use of accounting information technology in the current era has been used in service companies because it has tremendous benefits, especially for companies. By using accounting information technology, companies can provide, manage, and report finances easily, quickly and accurately. Besides, the accounting system has the advantage of helping make decisions with the aim of collecting and storing all activity data and transactions that have occurred, then these data can become a useful information, also become a decision maker that affects all company assets. The purpose of this final project is to facilitate service companies for assets management in the beautiful palm recreation park in order to get the ease in running the business.

This project uses a straight line method of calculation (Straight Line Method) for depreciation, the application of the accounting system as for the application using the Waterfall method.

Based on the application made above, it is concluded that the application of the accounting information system in the management of the Palm Indah recreational park can help the calculation of assets using the Waterfall method which is in the process of the device software sequencing, and straight line calculation methods can help managers maximize the performance of the business premises, minimize data loss and theft as well as providing the right decision making.

Keywords: Assets, Accounting Information Systems, Waterfall, Straight Line.
