ABSTRACT

In today's world people use a dispenser as a water dispenser, dispensers come in many forms now. Although many forms of a dispenser keep water as a water holder and transfer water to a glass. In the case of today's public drink it likes to mix a few drinks together. Besides it tastes better, mixing a few drinks into one makes a new flavor. For it was built the final project of the system control for mixing beverages using Arduino that could mix drinks more practically by just push buttons.
