

Abstract

Several important aspects needed in the management of the field of education, one of which is extracurricular. These aspects are needed to support the process of school activities outside of teaching and learning activities (development of student interests and talents). In order for all non-academic activities in schools to run well, good governance is needed. This research was conducted in a school in the city of Bandung with the aim of helping and developing an information system for student data collection, extracurricular activities and grades so that they can be properly and adequately documented. The school's extracurricular information system application is designed using a website base. With this application, the data collection process in schools becomes easier, more efficient and accurate in data management by the school. The results of the research show that the school and the respondents strongly support the application of the information system of SMPN 34 Bandung in the web-based extracurricular field that has been built and developed.
