

ABSTRACT

In the era of redundant information, where many open data sets that can be accessed by everyone are good for all, the availability of valuable information can be of good value for the benefit of companies, businesses or governments. Data visualization has become big business, because communication is the difference between success and failure, no matter how clever the analysis is. The ability to visualize data is a skill in business. In fact, we can see the hot topics right now only with graphs or diagrams as a form of data visualization. To get the desired information, exploration is needed to get maximum results. The purpose of this final project is to provide a proper visualization of the data presented. Data visualization is a solution for communicating abstract data to help understand data by utilizing the human visual system. The results of this visualization are effective by involving charts that are in accordance with the data provided and can be run on the website platform.
