

ABSTRACT

Ulul Azmi Orphanage is a social institution located in the city of Cimahi. This Orphanage takes care of children from underprivileged families around the city of Cimahi. In addition, the Orphanage also serves Islamic religious consultation for the community. This Orphanage is funded by donors and independent nursing institutions. Ulul Azmi Orphanage requires additional media to disseminate nursing information so that it is expected to add institutions and institutions that need online transactions so that it is hoped that it can facilitate donors to make donations. Based on the explanation above, it has been built a web-based application or website of the Ulul Azmi Orphanage that packages nursing home information. Communities can also register as donors through this website. Besides that donors can also see activities in the institution. Donors can also register through this website and transfer donations through the bank. This application is based on analysis and design with the waterfall process model. Software development methods using structured programming. This application is created with Php and Html scripts and MySQL will be used as a database processor.
