

ABSTRACT

Nowadays the use of smartphone gadgets has become a necessity for most people. Offsetting with this phenomenon, currently looking for information is not difficult. A lot of information is available on the internet. In fact there have been many information systems applications that are informative and educational. Users just sit and open their smart phone, all information is available from all directions without having to go to the source of information or even wait a long time. In this study, researcher built applications that can be useful for information sources of musical instruments originating from Bali. This application is based on Android with Augmented Reality (AR) technology created using Unity3D and the Java programming language, this application is an information system to introduce musical instruments originating from Bali that can be accessed anytime and anywhere using a smartphone with an android operating system.
