

ABSTRACT

Currently, the motorhome is becoming one of the trends in Indonesia, especially from the campervan type, this is due to boredom due to the implementation of the Covid-19 lockdown so that when the new normal period is enacted, people start looking for ways to be able to vacation and breathe fresh air while avoiding of the risk of coronavirus transmission, to minimize this risk people choose to camp using a campervan which is considered safer than having a vacation by staying at a hotel. Interestingly, this trend actually affects the middle class a lot, who are starting to change their MPV car into a campervan. One type of car that is often used as a campervan is the Nissan Evalia. This relatively small dimension car requires users to be careful in choosing what facilities will be applied to the campervan, unfortunately, with the dimensions of the Nissan Evalia car, it is not possible to install cooking facilities in the campervan cabin because it can interfere with the flow of user activity in the cabin, for It is necessary to design a portable kitchen set for the Nissan Evalia campervan so that it can save car cabin space and also increase the effectiveness and efficiency of cooking activities during the camp.
