

ABSTRACT

Online Tutoring Applications The Administration Module is an additional Website-Based Online Learning Activity Application. This application is a concept of developing, implementing, and implementing technology that can be applied to an online tutoring, which can help as a form of interaction between students and teachers. Tutoring is also an activity of providing continuous and systematic assistance to individuals or students in solving problems they face related to learning activities. The application to be built is a web-based application that uses PHP, HTML, CSS as programming languages and MySQL for databases. For system development using the waterfall model, and the manufacture is given a time limit. With the completion of the online tutoring application, this administrative module is expected to help the tutoring place to carry out service activities using the web-based application in an online way as well as easy, fast and efficient handling.
