In the era of Industry 4.0 as it is today, which is marked by all-round digitalization with the presence of various technologies, it has an impact on the pattern of human life who always wants to be fast and easy in carrying out activities. The reduced interest in library visitors is caused by the growing development of digital book applications that can be accessed anywhere so that visitors no longer need to visit the library to get information and education needs. Libraries must improve facilities and other supports that can attract people's attention to visit the library.

The Siak Sri Indrapura Regency Regional Library Building is a regional library located at the Regency / City level. The lack of facilities and the condition of the interior of the library building that has been damaged can cause visitors to feel less comfortable when doing activities in the library and result in a decrease in library visitors. In addition, providing characters from elements of regional potential and regional culture into a library space will certainly add value to a good function so that people can also learn from the values of cultural characters that exist in the area where the library originates.

The interior redesign of the Siak Regency regional library provides interior design solutions for damaged spaces, adding facilities for space requirements that are the focus of current library services and performance, such as: shared meeting rooms, discussion rooms, and restoration and book collection rooms. Arrangements that are more attractive and in accordance with the needs of the current library space will make the interior of the library interactive and educative so that visitors are interested in coming again to the regional library of Siak Regency.
