

ABSTRACT

Libraries have a role in advancing people's way of thinking with the collections and services in it. The library as a public facility that provides a means to obtain and add information and educational recreation at the same time intended for the entire community is a place to access a collection of print and non-print media such as books, magazines, newspapers, microfilm, VCD/DVD in large quantities that need to be developed. with the development of the times, especially in the era of technological developments like today. The East Kalimantan Library and Archives Service which is the Provincial Library in East Kalimantan as a center for information, education and culture that has recreational and educative facilities can play a role in the community's efforts to acquire knowledge of technology. The volume of collections in the building becomes more and more with a fixed building area. This of course causes a narrowing of the exhibition space in the library and even some collections are forced to enter the warehouse. Some reading rooms are also getting smaller. The level of lighting that does not support reading activities makes the library less comfortable for library visitors. as a library that has a mission as a technology center. The East Kalimantan Provincial Library does not yet have adequate technological facilities, only wifi facilities, computers and book search engines are available in the library. Then the design will be done by solving existing problems, and using a technological approach by applying technological aspects to the interior of the library.
