

Abstract

The house is one of the buildings made to live, shelter, rest and gather with family. Houses have a variety of types, one of which is type 45 and above. Each house has a room requirement, according to the needs of its residents. The room is located at home, equipped with furniture. But the furniture used does not have a lot of storage space, so the occupants of the house store things in an undue place, and make the room become messy. With a messy room, the activities carried out are hampered. One of them is in the entryway room. The lack of storage space in the entryway room, is of particular concern, as it affects the cleanliness and comfort of the room. So conducted research that aims to be able to solve problems in the messy entryway room. The research was conducted by descriptive qualitative method. The problem solving process is investigated by describing the subject/object of the study and the results of the study are used as evidence to draw conclusions in the study. Products designed according to the needs of homeowners in the entryway area, namely designing multifunctional furniture for type 45 houses.
