Suryakanti Foundation Clinic is a therapy clinic that is oriented to the development of deficiencies and disabilities in children aged under five. Children with Special Needs are children who experience limitations or extraordinary physical, mental-intellectual, or emotional influences significantly in the process of growth or development compared with other kids in his age. Different characteristics in children may cause different therapi activities to be carried out depending on the disorder they have. This child's behavior becomes the focus to be developed into the themes and concepts used. The use of a biophilic design approach aims to increase the interaction between nature and humans. The themes and concepts used are in line with the biophilic design approach where this design aims to stimulate children in therapeutic activities by processing interior elements

Keywords: children with special needs, therapy clinic, biophilic design
