

ABSTRACT

There has been a dramatic change in behavior patterns in the community, especially in the use of masks. Masks at this time have become part of the complement of clothing. The design of the mask has become a separate icon for the current fashion trend, where masks are no longer only designed as protective equipment but as necessities that have ethical and aesthetic values. Where at this time a person must also be able to adapt to using a mask which has become a trend at this time. This research was conducted to utilize patchwork which increases in number every day and is processed as a mask and how it affects the comfort of users when using the patchwork mask. The subjects of this study were women aged 18-40 years who had a fairly high level of mobility outdoors.
