

ABSTRACT

This design aims to analyze the activities and needs of designers while working at the desk. In general, designers when working only use an ordinary work desk equipped with drawers and not even equipped with drawers so that designers feel less fulfilled in the use of work desks. Therefore, designers need to design a work desk equipped with ergonomic aspects and features such as cable organizers, sticky boards, shelves equipped with drawers that are adapted to the work tools used by designers so that they can increase the efficiency of designers in their work. These aspects can influence and create a good experience and atmosphere when working. This research method uses a qualitative method with an approach in the form of a descriptive approach, data collection using observations, questionnaires, interviews and observing and discussing. The design method is completed by using User Centered Design and discussing. The design method is completed by using User Centered Design
