

ABSTRACT

Riding Commuter shoes are Apparel products worn by two-wheeled users, but there is a factor that riders prefer regular shoes because they are more comfortable, while Riding Commuter shoes are created for daily use and prevent accidents and protect on their feet and ankles from being worn cause both heavy injuries and minor injuries when driving. The design uses an ergonomic comparison method in order to create comfortable and safe Commuter riding shoes.

The Riding Commuter's shoe design results are expected to increase two-wheeled users in wearing Riding Commuter shoes because these safe shoes become one of the aspects of regulations on the current law and make it clear to two-wheeled riders that safety on the feet has a big role to play when driving two wheels.
