

ABSTRACT

The development of tourist villages has a positive impact both on the tourism sector and on the community, especially in improving the community's economy by utilizing the potential of the environment. Likewise with the Laksana Kamojang Tourism Village, which makes homestays an additional income investment. However, the local community's lack of insight into accounting and financial records led to the determination of homestay rates by calculating prices. In addition, there is no good financial record in the homestay business in the Laksana Kamojang Tourism Village. So, with this application, it is hoped that there will be good financial records of the homestay business and losses in the homestay business can be avoided.

This application is a website-based application that is useful for determining homestay rates using the full costing method and financial records for the homestay business in the Laksana Kamojang Tourism Village, Ibun District. This application is made using Visual Studio Code and the PHP programming language. Application development goes through several stages such as needs analysis, literature study, application design, application creation, and application testing. After testing the application, 88.65% of potential users or respondents agreed and felt helped by the website-based SiTariF application.

Keywords: Homestay, Tourist Village, Website, Rates, Financial Records, Full Costing
