

## **ABSTRACT**

Faculty of Social Sciences Education is one of the faculties at Universitas Pendidikan Indonesia. Currently, FPIPS is initiating an environmentally friendly and sustainable campus program. This concept is expected to support the departments in FPIPS UPI and able to realize FPIPS UPI's mission as an internationally recognized campus in 2024.

However, until now, the Faculty of Social Sciences Education UPI has not been able to run the program properly. There are several factors that cause this including the design of the space that has not been well designed to support the desired learning concept. The design of the space that is currently found in the existing one has a conventional arrangement like a lecture building in general, even though with the programs and missions that they have, FPIPS UPI should be able to provide a different atmosphere. Using this program, the design of the learning space should be created and seen directly on the interior design of the building as a whole in line with the program that is currently being implemented.

Therefore, it is necessary to redesign the UPI Faculty of Social Sciences Education building, which is able to answer the problems encountered in the building. Through an environmentally friendly interior approach, the design of the space can be designed better and the interior can be a medium for these improvements directly.

Keywords: University, Environmentally Friendly, Sustainability.
