

ABSTRACT

The increasing growth in the number of students, the higher the quality of education in terms of the needs of space, facilities and education systems provided to develop the abilities, character of students and grow the potential of students to become human beings of faith, noble character, independent, creative, and responsible, and discipline. Darul Hikam College is an institution that has Islamic educational institutions including boarding and non-boarding schools with superior and international nasinal levels. Darul hikam has a special curriculum, namely TCB (Taqwa Character Building) which aims to instill Islamic values in culture, character, and achievement.

This design project takes school data that is crowded with design limitations on the Darul Hikam High School building located in Dago which is based on the results of observations made related to problems in the interior scope that need to be redesigned to provide comfort, security, and meet the needs of space users in it. With this, it can make belih users effective and efficient in activities and make a reference or reference to the needs of infrastructure for high school educational institutions.
