Tasikmalaya Regency is one of the regencies that only has one hospital in its area, with many limitations in the technical design of facilities and infrastructure in it. Most existing hospitals do not pay attention to how psychologically space can influence patients to feel good and comfortable to help the patient's recovery process. With these problems PT. Madina Medika Utama and PT. Cahaya Bangun Energi plans to design an intermediate private hospital or equivalent to a class C general hospital by providing a psychological approach. The design of the Madina Medika Center Hospital is expected to be able to build a new hospital that can create health services with the correct technical design standards for facilities and infrastructure to help the patient's recovery process physically and psychologically, create communicative circulation, and improve staff performance in it. This study uses a qualitative method that is described in the form of words by observing and taking the object of comparison from several hospitals in the Regency and City of Tasikmalaya.
