The hotel is one of the most popular tourist destinations in the country, particularly in the Jakarta region. The heart of the city, South Jakarta, is a business and commercial district. Being an upscale neighborhood, South Jakarta is home to several of Jakarta's most significant offices and commercial hubs. The quantity of office employees in the South Jakarta region raises the stress level of the local population, particularly the workers. So many office professionals decide to take a staycation at a hotel with suitable entertainment options. This design is a new interior for a 4-star boutique hotel in south Jakarta with the "Recharge space" psychology approach. Recharge space is an approach concept that aims to create a space atmosphere that can restore the stress of visitors so that they get the maximum quality of staycation and rest. This design uses qualitative research methods by analyzing data in the form of literature, standardization, and comparative studies at three boutique hotels in Jakarta. The result of the design is interior a 4-star boutique hotel "recharge space" that applies elements of nature, human senses, and user psychology, as well as the luxury as a design reference. It is intended that the spatial psychology-based interior design of this boutique hotel would help address the issue of South Jakarta's high level of stress and produce the perfect hotel environment for a staycation, as well as benefiting authors and other parties.
