

ABSTRACT

The increasing number of neglected children and poor economic families in Indonesia is one of the problems that must be solved. Because, these children are the next generation of the nation, therefore the need for child protection is equipped with the provision of educational and social facilities for children. Child Welfare Institutions are one of the good solutions to reduce child problems in Indonesia. The Child Welfare Institution, better known as the Orphanage, is an alternative to child care and facilitates the needs of children both physically and psychologically. The Dana Mulia Orphanage Foundation in Bandung is one of the orphanages that plays a role in reducing child problems in Indonesia. This orphanage has been established since October 10, 1948 which was originally a shelter and protection for children due to the struggle for Indonesian independence. This orphanage is located at Jln Pasteur No. 12, Bandung City, this orphanage facilitates all the needs of children such as providing education, social services, food, and the development of children's talents as well as children's religious fulfillment. Not just a place to live, this orphanage is also an external element that influences the formation of the character of foster children to be more positive and independent. Therefore, with this case study at the orphanage, the author reviews the study of the orphanage in terms of spatial, ergonomics, materials, referring to the minimum service standards of the orphanage to produce an orphanage design with the goals of the orphanage listed in the vision and mission of the orphanage. , and complete with activity programs and facilities that suit the needs of the orphanage children.

Keywor: orphanage, activity, character building.
