

ABSTRACT

The development of tourist villages has a positive impact both on the tourism sector and on the community, especially in improving the community's economy by utilizing the potential of the environment. Likewise with the Laksana Kamojang Tourism Village, which makes homestays an additional income investment. But the lack of distribution of related information about existing homestays and tourist attractions makes it difficult for tourists to find information, so there is a need for digitalization supporters to facilitate the distribution of information related to homestays and tourism in Kamojang village. So, with this application, it is hoped that there will be an increase in tourists who vacation in Kamojang Village.

This application is a responsive website-based application that is useful for the Kamojang Tourism Village Homestay Catalog and Reservation, it is hoped that with this application it is hoped that the dissemination of information about homestays and tourist attractions in Kamojang Village will be better, so that the surrounding community can also benefit from the increasing number of tourist visits. Increasing the community's economy from the tourism sector will trigger an increase in the quality of tourist destinations. With the readiness of supporting destinations, the Kamojang Tourism Village Homestay Catalog and Reservation Application will have a high selling value because it can make it easier for tourists to travel.
