ABSTRACT

Hotel Ahadiat and Bungalow is a service company that provides services for lodging and tourism. The company is located on Jl. Sindang Sirna Elok No.9, Sukarasa, Kec. Sukasari, Bandung City, West Java 40152. The company's finance department in calculating and distributing service charge revenues is still manual using excel so it is very possible for errors in calculations and data not to be stored permanently. This web-based application will help the finance department and HRD in calculating and sharing service charge revenues. This application is built using the PHP programming language method and the CI4 Framework to handle the problems that occur. Through this application, the finance department can process the service charge percentage, distribute the service charge according to the position, and calculate the PPh 21 service charge. Testing the application using the black box testing method. The software development method in this final project uses the Development Life Cycle (SDLC) software, namely Prototype.
