ABSTRACT

This study aims to make it easier for Muslimah Salons to recap or record what is in the salon. Salon Muslimah DPM is a service company engaged in beauty services. The services provided by Salon Muslimah DPM are hair, face and body treatments. The treatments offered by the DPM Muslimah Salon are very varied, ranging from cream baths, facials, body scrubs / scrubs and many other treatments. In addition to being able to do treatments at the salon, this Muslimah Salon can also do home treatments for all available treatments by complying with health protocols. The functionality contained in this application is recording income, recording customer booking data in the salon and several accounting reports. Making this web-based waserda application using the PHP programming language and the Code Igniter Framework. The development is carried out using the System Development Life Cycle (SDLC) using the waterfall method. And testing is done using Black Box Testing.

Keywords: Application, Revenue, Booking, Financial Report
