ABSTRACT

Currently, internet technology is no stranger to everyday life. The current development of information technology, especially internet technology, has a special role in the world of education. It is possible that there are many potentials and resources that can be utilized, one of which is the creation of a web or WWW (World Wide Web) is a new method that runs in the internet world, which has grown rapidly as a medium for delivering various kinds of information. Website is used as a medium of information and has become a new breakthrough, whose role is almost the same as information media using paper.

In this final project design a website as a service and information medium that can be used by teachers and school staff of RA Al-Hidayah Logam Bandung which is useful as a service media, communication media, and promotion tool. And is also expected as a medium of information for the wider community to be more familiar with RA Al- Hidayah Logam Bandung.

The final project "Creating a School Website as a service and information medium at RA Al-Hidayah Logam Bandung" was built using HTML and PHP to create various views on the website and MySQL which is used to store various information about schools and display information on the website. web page. This application was created and adapted to the needs of the teachers and staff of RA Al- Hidayah Logam Bandung.
