

Abstract

The development of Indonesian education is currently in progress because it increases the educational needs of the Indonesian people, but not all educational institutions in Indonesia are facilitated with adequate technology. The design of this website-based Academic Information System aims to make it easier for teachers and students in their educational administration affairs. The result of this application is an information system website that can make it easier for teachers to record and manage administrative data in the form of grades and student attendance and students can check the data inputted by the teacher and stored in the MySQL database quickly and efficiently.
