ABSTRACT

Ksatria Gym *is a business engaged in the field of sports in which it serves every customer who comes to do sports fitness by providing supporting equipment. Activities at Ksatria Gym include processing service data that is still done manually (handwritten) which will later result in errors in the data collection process, transactions and scheduling that often experience errors. The problem that is used as the basis is the process in service to the gym knight. Therefore, it is designed a web-based application using the Waterfall model SDLC method and php programming language. Fitness Services application at Ksatria Gym can help managers in data processing at Ksatria Gym. Keywords: Fitness, Membership, Transactions.*
