ABSTRACT

Application for selling animals and fodder fadhillah farm: sales admin module is an application that will be used by the community to facilitate the process of selling animals and fodder to their own area or outside the city. The making of this application is based on the owner/breeder who has limitations in selling livestock and feed. The limited scope of sales of farm animals that still have to go to the market and promotions by telephone or broadcast via the Whatsapp application, as well as a recap of sales data that still uses the manual method, which is written in a ledger. Therefore, we need an application for selling animals and fodder fadhillah farm: admin module to facilitate the management of sales admin data and assist in expanding the scope of animal and animal feed sales. This application was built using the PHP programming language, with the Codeigniter framework and database using MySQL. The application development method uses the Waterfall methodology
