Fashion is an inseparable part of people's daily appearance and style. The rapid development of fashion has spurred an increase in public interest in textiles, in this case it can be seen by the emergence of various kinds of variations in the types and characteristics of textile materials. This occurs in several types of textiles, namely cotton fabric with various design, color and character characteristics, and tulle, which has the characteristics of mesh or holes, transparent, thin and light. With different fabric characteristics, there is potential for mixed material processing on patterns cotton fabric and tulle fabric as embellishment with the application of manipulating fabric techniques. This research was compiled with data collection techniques using qualitative methods in the form of literature study, observation, interviews and exploration. This aims to optimize the development of mixed materials in making variations of embellishment to be applied to women's clothing.

Keywords: Patterns Cotton Fabric, Tulle Fabric, Mixed Material, Embellishment, Manipulating Fabric, Women's Clothing.
