ABSTRACT

In the present, the popularity of ornamental plants still persists. Every year there are always types of viral ornamental plants that get a lot of public attention. However, during the pandemic, many people tend to often carry out their activities indoors. This is what makes some people bored and looking for a new hobby or activity. One that is quite loved is maintaining ornamental plants.

Therefore, the author uses the Extreme Programming as the development of an ornamental plant lending website. The reason for selecting the Extreme Programming method is because the project from this final project has a relatively small project size and is carried out with a small group coverage, ranging from 2 to 10 group members.

From the results of the research that the author has done, some of the obstacles experienced by plant owners are not having a container to make ornamental plants as a place of business, and some of the event organizers renting ornamental plants in order to reduce the amount of use of funds. Therefore, the author and the team developed an ornamental plant rental website, namely SeTanam.
