

ABSTRACT

The An-Nasr Mosque is one of the typologies of the jami' mosque which in addition to being functioned as a place of worship is also expected to function as a center for social activities for the surrounding community. To support the functions of the mosque, it is necessary to support facilities in the mosque building. However, from the results of observations, there are still supporting facilities at the An-Nasr Mosque whose function has not been fulfilled to support the activities of the congregation and the administrators of the An-Nasr Mosque. In addition, the Islamic elements and the concept of a warm, intimate, familial, and close to nature atmosphere as a whole have not been implemented properly. This is what motivated the author to redesign the An-Nasr Mosque.

The purpose of Masjid An-Nasr is to become a mosque that is open to all Muslims without discriminating from any particular sect. The redesign of the An-Nasr Mosque aims to redesign the interior of the An-Nasr Mosque and its supporting facilities in accordance with the standards of the Director General of Islamic Community Guidance Number DJ.II/802 of 2004 in order to maximize the function of the mosque as a place of worship as well as a center of activities. social community so that it can be in accordance with the objectives of the An-Nasr Mosque. As well as to design interior designs with the aim of being able to implement Islamic elements and a warm, intimate, familial, and close to nature room atmosphere in the interior concept of a modern mosque building. The methods used in the data collection stage for primary data are interviews, observations, field studies and documentation, while for secondary data, namely literature studies and comparative study analysis. The redesign of the An-Nasr Mosque will focus on maximizing the function of the space, providing facilities in the prayer area that can facilitate all worshipers regardless of their individual abilities, as well as the application of natural materials and other combinations of materials to the space-filling elements that aim to be able to apply Islamic elements. and the concept of the overall atmosphere of the space. The benefits of this redesign are expected to have a good impact on the mosque because of the development of designs in terms of interior and in terms of the comfort of the congregation and facilities for the provision of social activities.
