

Abstract

As of now, Depok City only has one government-owned public hospital, which is the Depok City Regional General Hospital which is a referral center for sub-districts in Depok City. Therefore, the Depok City Regional General Hospital has a great responsibility to be able to facilitate and provide maximum health services to the surrounding community. Based on this, the researchers redesigned the Depok City Regional General Hospital to meet the needs and comfort of the community in using hospital facilities. Researchers use a healing environment approach in the design, this is based on the hospital's need for elements that emphasize the concept of a healing environment in supporting the patient's recovery process by reducing stress triggers and providing supporting aspects of patient recovery by providing natural elements and supporting relaxation. patients by providing good input to the 5 human senses, namely sight, hearing, smell, taste, and the sense of touch such as placing healing gardens in several places in the hospital, providing soothing music accompaniment and reducing depression, natural sounds such as the sound of rain, running water, and the sound of birds that can provide a sense of calm to the patient.
