*The terminal is one of the public facilities in the field of transportation that serves as a place to stop public vehicles as well as increase the lowering of passengers. Leuwi Panjang Terminal is located in Bandung City, West Java, Indonesia. The terminal is included in the Type A terminal with a land area of 4.5 ha. Leuwi Panjang Terminal has several shortcomings that have an impact on the activities of leuwi Panjang Terminal users, shortcomings encountered such as the circulation flow in the building that is less effective, the number of abandoned spaces, inadequate facilities and has not met the standards of Terminal Type A facilities. From these problems, a universal approach is taken wrapped with the theme of designing mobility and connectivity which will make it easier for users to carry out activities with relationships between spaces can accommodate activities in the Leuwi Panjang Terminal as well as the concept of contextual modern design which makes it clear that forming a design based on a form that has been recognized with development and variation from before to being an established condition.*
