

***Interior Redesign of Type C Public Hospital in Bekasi Regency using Room  
Psychology Approach***

**RIZKA TAUFIK SYAMLAN**

***ABSTRACT***

*Hospitals have a negative impression in the eyes of the public because the atmosphere provided is uncomfortable and can become a place for the spread of disease if hygiene conditions are not maintained. For example, during a pandemic, patients and the public question the safety of hospitals in the form of health protocols. This can conclude the patient's discomfort when visiting the hospital and can be changed by designing a class C hospital according to government standards and providing comfort to patients who visit and stay and doctors who work at the hospital. Therefore, the design used in this report is a type C general hospital.*

*The method used to design the hospital is to use a spatial psychology approach. This method considers the atmosphere provided in each room in the hospital, thus making the patient comfortable and relaxed during the consultation. This method can be applied to hospital interiors starting from using relaxing colors and stimulation from several materials used in furniture and interior elements.*
