

ABSTRACT

Grocery Store is one of the business units engaged in the sale of basic necessities and basic needs. Constraints achieved by the grocery store during its business activities are the absence of a sales information system, POS (Point of Sale) which functions as a tool in recording sales transactions and complete inventory of goods. The methodology applied in this research is applied research that aims to solve practical problems in the modern world. The result of this research is a website-based POS (Point of Sale) application. The implementation of the research has many positive impacts where owners and sellers provide grocery stores as users who feel it is easy to add sales transactions and replenish inventory because they can immediately unify the number of incoming sales transactions and inventory items that have been recorded in the system.
