ABSTRACT

This study is entitled "Framing Analysis of Bjorka Hacking Reporting on Detik.com". The purpose of this research is to find out the construction of the news by Detik.com on the news of the hacking by Bjorka hackers. This research is a qualitative research using constructivist methods and is a descriptive research. This study uses framing analysis with William A. Gamson and Mogdialini's model as the main reference. This research refers to previous studies whose research focus is framing analysis, with different or similar framing analysis models to this research. This study chose Detik.com as the online news portal for research by taking 5 (five) pieces of news in the September 2022 timeframe. Referring to the formulation and objectives of this study, it can be concluded that Detik.com constructs the news it contains with cornered the figure of Bjorka as the sole actor in the series of actions he carried out. Detik.com also contains statements from the figure of Bjorka who support them in building a narrative and the construction of the figure of Bjorka who is arrogant and arrogant during his hacking actions. However, Detik.com does not direct readers to the urgency that cybersecurity in Indonesia is not properly maintained by the government, causing a series of incidents of hacking by irresponsible parties to occur repeatedly without a solution.

Keywords: *Bjorka, Detik.com, Framing, Hacker, Hacking*
